Designs

Dialogc Development Environment

Design and implementation of a development environment and GUI builder language. C analyzer and parser library (JNI), editor development environment written in Java, Bash installer script

Python Graphing Calculator

Team project demonstrating a Test Driven Development cycle as well as specification restrictions in which a class-less, library restricted Python design was implemented

Synapp2 Integration

Development with free and open source software project Synapp2. Feature implementation, documentation, IBM Informix Dynamic Server software communication, and Alfresco Community ECM plugin integration. Design and development of back-end application generating code, user-level decision-making, and additional data queried business report functionality

uMinimal

Designed and developed an API-less Youtube web application. The free and open source project uses PHP, Javascript, CSS to build a dynamic video feed by scraping youtube channels, and offers a user controlled RES themed experience.
