Experience

Creator of *Core*   July 2016 to Present

Full stack developer and maintainer of Core Instance Data Storage, an MVP side project. Core is a data processing and storage service built with the latest technologies like Bootstrap 4, Slim 3, and PHP 7.

Web Developer at *Symcor Inc.*   May 2016 to August 2016

Worked as a full stack developer in the Enterprise Architecture team. Worked with a full Java stack doing feature implementation on a complex enterprise application used by most of the employees at Symcor.

Web Application Developer at *Adknown Inc.*   September 2015 to December 2015

Worked on dozens of WordPress sites doing system administration, and in-house plugin integration. Wrote highly optimized JavaScript user analyzing scripts, built dynamic JavaScript & CSS3 ads, and wrote many highly efficient cron job scripts. Designed an Amazon Web Services wrapper web application.

Software Developer at *Dainty Foods*   May 2015 to August 2015

Worked primarily on feature implementation and integration with *Synapp2* web application builder. Mainly integration with *Alfresco Community ECM* and *IBM Informix DS database engine*.

Education

University of Guelph   Expected to Graduate May 2018

Bachelor of Computing, Software Engineering (Co-op)
